

Train the Model on IBM

Date	15 November 2022
Team ID	PNT2022TMID37505
Project Name	Car Resale Value Prediction

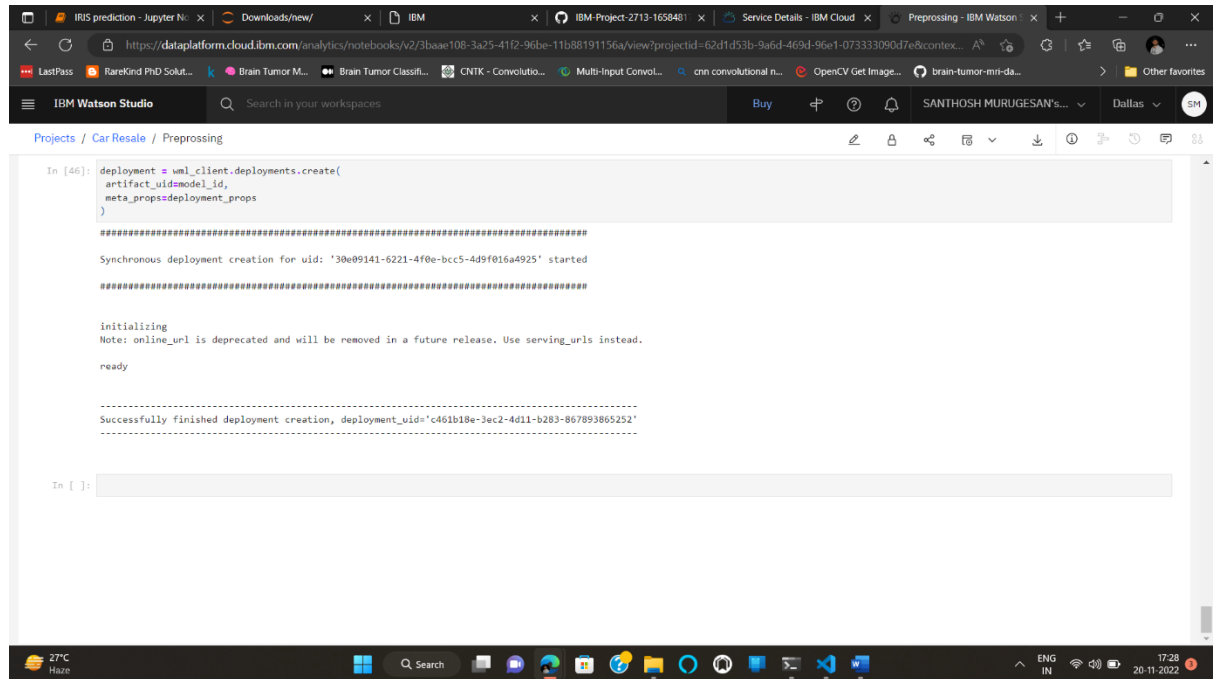

1) Register for IBM Cloud

2) Train the ML model on IBM

3) Integrate Flask with Scoring End Point

The screenshot displays a Jupyter Notebook interface within the IBM Watson Studio environment. The browser's address bar shows the URL: <https://dataplatform.cloud.ibm.com/analytics/notebooks/v2/3baae108-3a25-41f2-96be-11b88191156a/view?projectId=62d1d53b-9af6-469d-96e1-073333090d7e&context...>. The notebook's title bar indicates the project is 'Car Resale' and the notebook is named 'Preprocessing'. The code cell, labeled 'In [46]:', contains a Python snippet that uses the 'wml_client.deployments.create()' method to create a deployment. The output shows a 'Synchronous deployment creation' starting for a specific UID, followed by an 'initializing' phase with a note about the 'online_url' deprecation. The process concludes with a 'ready' status and a confirmation message: 'Successfully finished deployment creation, deployment_uid='c461b18e-3ec2-4d11-b283-867893865252''. The bottom of the image shows a Windows taskbar with a temperature of 27°C and a date of 20-11-2022.

```
In [46]: deployment = wml_client.deployments.create(
          artifact_uid=model_id,
          meta_props=deployment_props
        )

#####

Synchronous deployment creation for uid: '30e09141-6221-4f0e-bcc5-4d9f016a4925' started

#####

initializing
Note: online_url is deprecated and will be removed in a future release. Use serving_urls instead.

ready

-----
Successfully finished deployment creation, deployment_uid='c461b18e-3ec2-4d11-b283-867893865252'
